In addition to school-wide competencies for all MPH graduates in Public Health, an MPH graduate in Quantitative Methods will attain skills in the practice of biostatistics for research in academic, government, and industry settings. Upon graduation s/he will be able to:

- Apply standard biostatistics methods to public health problems.
- Work with data files and statistical packages.
- Demonstrate the ability to recognize the appropriate research design for an analysis problem.
- Communicate effectively about biostatistical methods, results and interpretation.
